Future-proof your IT skills

The network is facing its biggest transformation yet.

Are you ready to become the connector this industry needs?

As networks become programmable and software-defined, IT teams need professionals who can connect network engineering, software development, and cybersecurity to create integrated, secure, and automated infrastructures to pave the way for new innovations.

The future of our automated, digital world depends on IT professionals with these integrated skills.

Will you join the digital transformation that is changing the world?

What is infrastructure automation?

Imagine shortening reaction times and creating a faster, more efficient and more secure IT infrastructure – with just a few lines of code.

Infrastructure automation makes it possible. By connecting the domains of software development and network engineering, automation improves efficiency and cybersecurity, all while paving the way for further innovation of systems and processes across the IT landscape.

What is DevNet Associate?

Are you ready to lead the transformation of the network? DevNet Associate is a certification-aligned, career-ready course that gives you hands-on, practical experience you can use to become a pioneer within the field of infrastructure automation.

In this course, you will learn foundational skills and knowledge that will allow you to develop automated, software-driven networks that can continuously adapt for business needs and transform the IT infrastructure.

By the end of the course, you're prepped to take the Cisco Certified DevNet Associate certification exam and gain industry-recognized certification straight away.

Build your software skills to automate the IT infrastructure and create imaginative new innovations in your field

The DevNet Certification Program

DevNet Associate is the first step in a larger certification program designed to validate key software skills for a new kind of IT professional. A DevNet Associate certification demonstrates your career-ready skills for entry-level roles, plus it's your foundation if you choose to pursue higher-level certification and further expand your job prospects.

Is DevNet Associate for you?

The DevNet Associate course is designed specifically for students. Learn from easy-to-understand examples and concepts, as well as practical, hands-on exercises with 100% free, virtual equipment.

Keep your skills modern, sharp, and ahead of industry trends

Learn in your own time and your own style – online or at an institution

Become directly connected with opportunities to earn the industry-recognized Cisco Certified DevNet Associate certification and get priority access to job opportunities

Future-proof your career in IT – learn skills that allow you to add unique value to your team, organization and projects, and become a differentiator in your field!
